

In the specification:

Please amend paragraph 19 on page 6 as follows:

[0019] The decant ring is preferably made of a material that provides low friction with the material used for the processing unit. An acetyl plastic material sold under the trademark DELRIN~~Delrin~~ has been found to be acceptable when used with moldable plastic materials. The ring is preferably solid but could be a laminate or similar manufacture.

Please amend paragraph 25 on page 8 as follows:

[0025] In the preferred embodiment, each support 32 is a hollow upstanding element made, for example, of thin metal or of plastic, and includes an isolating~~insulating~~ grommet 40 at its upper surface. A cylindrical sleeve 42 is held by the grommet. A bolt or the like is passed through the portion of the enclosure 36 to secure the enclosure to the interior part of the grommet and the bolt is received in the sleeve 42. A snubber washer is also provided to resist the forces applied by the rotor to the enclosure. The isolators are available commercially, and one supplier is the Lord Corporation, Erie, Pennsylvania. Feet 44, preferably made of resilient material support the base element on a horizontal surface.
